ME 201/APh 250, Homework 3:

Assigned: Friday, Apr 19, 2019
Due: Friday, Apr 26, 2019

1. N&C 5.1, 5.2

2. Go here and click on edit circuit. Implement your own 4-bit phase estimation algorithm and test it on unitaries of your choice. Submit a screenshot of the circuit operating on one of the unitaries along with some written description of what the phase should be for the given unitary (and hopefully the two match).
